US \$36.79. US \$39.99.Q: How can I speed up a query that counts images that have been uploaded? I'm running a query that counts how many images have been uploaded to the site. In my code it loops through a list of image links. If a user shares their profile image, how can I get a count of how many others have shared a profile image? \$count=\$row['img_cnt']; \$res = mysql_query("SELECT COUNT(*) FROM stats WHERE userid='\$id'"); \$row_cnt = mysql_fetch_array(\$res); \$count=\$row_cnt[0]; It's a fairly high traffic site that has hit over 500,000 visits. I have to count a lot of images. Is there any way that I could speed this up? A: Not sure I fully understand but you can keep track of the images by updating the table every time you upload an image. The below is pseudo-code... Table definition: CREATE TABLE stats (id int unsigned NOT NULL AUTO_INCREMENT, img_id int unsigned NOT NULL, userid int unsigned NOT NULL, img_cnt int unsigned NOT NULL, PRIMARY KEY (id)); This table is a bit like your user table in the sense that it stores image id's. I'm not sure whether your user table would be shared but maybe it is?? This table tracks which images have been uploaded. Upload function: db: INSERT INTO stats(img_id,userid,img_cnt) VALUES(\$img_id,\$userid,1); I'm assuming that you keep a record of which image was uploaded by doing a WHERE img_id=\$img_id and

ecm titanium 1.61 Category:
Eduwin software This site is for
all computer users to try and
buy. It is for different versions
of the same computer, but there
are some if you do not want to
buy the files for 30 days for free
downloading. ECM Titanium is
a comprehensive ECU (Engine
Control Unit) software that can
connect and view all ECU data
quickly and easily without the
need of the OEM software. You
can easily view the data on your
computer screen (that you can

use to change your vehicle's performance, make it more fuel-efficient or optimize engine performance with tune-ups) without installing separate displays. ECM Titanium is designed to be as complete as possible and is made with powerful controls and features. It also includes the latest up to date ECU and information about all ECU along with a powerful scan tool, as well as the ability to add more ECU data from the . ECMTitanium supports many

ECU applications for various vehicles, such as Volkswagen, Mercedes Benz, Audi, BMW and Porsche. Just choose the ECU, and the scan tool will scan the ECU in a matter of seconds and show you the available data. ECMTitanium includes multiple features, such as viewing all available ECU data on your computer screen and tuning the ECU with one simple mouse click. The software also includes a scan tool, an ECU database, a powerful document editor, a

window for popups, and more.
ECM Titanium allows you to
accurately and easily,
autonomous and completely safe
to interpret the files that are
contained inside the motor ECU.
ECMTitanium has been tested
on ECU and Ford applications
with 100% success, including
but not limited to ECU
applications from: Ford ECU
