The availability of HyperMotion Technology is optional, but for those who want to dive deep into the football action, it provides an entirely new dimension to FIFA's most in-depth football simulation. To experience FIFA 22 in the game engine and see for yourself what is possible, head to www.football.com/hype or download the latest version of the free Football Manager Mobile. You can play with HyperMotion technology by selecting "S: All Motion" in the Pro Controller menus. Please note that fan and player feedback is required to fully understand how the game mechanics in the world of Football Manager will affect gameplay. There are currently five major gameplay features that are based on this new cutting-edge game engine. Immersive Match Experience In FIFA 22, all the intelligence powering your football game is put to the test as you put your team through the intense football matches that FIFA games are famous for. Players will run, sprint, tackle, pass and shoot using the latest motion capture technology and the immersive technology that enables you to virtually walk and run alongside your players in a variety of game scenarios. With an upgraded player movement engine, FIFA 22 will be the ultimate football simulation – so you can truly understand and feel every moment of a football match. Physically-Based Player Physics Powerful physics is the foundation of your football game – and to ensure your tactics and team playing style are accurately reflected in the action on the pitch, FIFA 22 is packed with the most detailed physics engine available. With all the pitch movements, ball effects, bumps and flight - the game physics in FIFA 22 are now more realistic, responsive and reactive. This means your players will have a deeper and more realistic feeling of being on the pitch, and more responsive interaction with the ball and your team-mates. Improved Ball Control and Player Interaction With more accuracy in shooting, passing and dribbling, you'll notice the movements of the ball are more closely linked to your players. During gameplay, this will have a direct effect on your play-style, forcing you to adapt your play by making better decisions. Improved shot direction in real-world matches will also give you more control over how the ball is played, and help you better understand the context of a football match. You can even create your own match play-style to simulate the way you want your game to play. New Goalkeeper Controls
